

Vampire VS THE SUN

Elevator Pitch (one paragraph describing the game)

The sun has transformed into a malignant force, morphing all life on Earth... except you. You are a vampire who must defend your castle against the undead hordes in an FPS zombie survival as the castle walls continually shift. Collect loot from enemies which can be used to help the player survive the onslaught.

Date	Version	Changes Made
04/30	0.1.0	Basic Sharpshooter tutorial steps

Date: When was this version written or updated

Version: Use semantic versioning if possible (e.g., 0.3.1), to show iteration and maturity.

Changes: List in quick bullet points, the additions and changes to each section of this document.

1. Project Info

This section sets the foundation for the document. It helps track progress, versioning, and project intent.

- A. **Game Title:** Vampire VS THE SUN
- B. **Author / Team:** Angel Aragonés, Nathan Cho, Nathan Le
- C. **Platform(s):** PC
- D. **Engine / Tools:** Unity, Github
- E. **Monetization Model:** N/A

2. Game Overview & Vision

This is your north star. Anyone who reads this section should understand what you're building, why it's unique, and who it's for.

- A. **High Concept:** Zombie survival game where you play as a vampire defending your castle against zombie hordes.

Example: "A cozy farming sim where you play as a retired necromancer growing undead crops."

- B. **Game Summary:** Zombie hordes come in the day as they are powered by the sun. During this time, the player must fend off zombies while collecting resources. When the sun sets, the player may craft using whatever resources they have gathered and set up new defenses for the next day.

- C. **Player Journey Snapshot:** Start with basic weapons and a few zombies to get familiar with control systems. First day cycle ends when all zombies are beaten and then the player can begin crafting, creating defenses against zombies and environmental hazards

Example: "In the opening minutes, the player explores a ruined town, finds a talking compass, and is guided toward their first safe zone. Late-game, they freely traverse hostile territories using gear they've crafted and allies they've recruited."

- D. **Unique Selling Points (USP):**

- a. Fun twist on vampire lore
- b. Light mechanics becoming a core part of the survival loop
- c. Day and night cycle keeps engagement throughout the survival loop

- E. **Target Audience:** People looking for a fast-paced action game with interesting mechanics

- F. **Genre & Inspirations:** FPS Survival with some elements of tower defense

G. Tone & Look & Feel: Low Poly Gothic

3. Core Gameplay Design

Describes how the game is played. Focuses on the primary loop, progression, and the player's feel of control.

A. Core Gameplay Loop :

- a. Day starts: zombies spawn and the player survives until night
- b. Night Starts: zombies no longer spawn and player is able to gather and craft materials to prepare for the next day

B. Player Progression: Craft stronger gear by gathering better resources

C. Controls & Input: WASD controls with typical FPS mouse controls

D. Difficulty & Challenge: Fixed difficulty that is meant to give players a challenge by forcing them to manage their health and their materials while fighting back the horde of zombies

E. Feedback Systems: Health bar, inventory, zombie kill count, clock to track day-night cycle

4. Game Mechanics & Systems

This section breaks down the underlying rules and systems that support the gameplay loop.

A. Core Mechanics:

- a. Shooting: many weapons will be available either thru pickup or thru crafting
- b. Crafting: manage your inventory and create new weapons and equipment
- c. Platforming: the player will be able to jump and navigate some challenging terrain
- d. Light: sunlight will hurt the player and empower zombies, the player must surround themselves in shadow to ensure their best chances for survival

B. Side Mechanics:

- a. Base building: a light amount of base building like placing walls and roofs to route enemies and protect yourself from the sun
- b. Day and night cycle: gives the player some resting time to gather themselves and prepare for the next horde wave

C. Interaction Mechanics: Players interact with the world by placing objects and navigating in a 3D space using typical FPS controls

D. Economy & Resources: Items are dropped by zombies when they are slain. These resources can be crafted into other material or equipment

5. Narrative, World, & Characters

Even if your game is light on story, this section helps define tone, cohesion, and world logic.

- A. **Themes & Emotional Arc:** Isolation and survival against seemingly insurmountable odds
- B. **Story Overview:** Start with nothing but a sword and work up to building your own vampire stronghold
- C. **Worldbuilding:** The sun has turned evil and is transforming all living things into zombies. You are a vampire who has escaped but found yourself surrounded.. Now you must survive
- D. **Main Characters:** The player is the main character: a vampire who must survive the horde
- E. **Player Agency:** Story wise, the player has no agency to change the circumstances of this world

6. Level & Encounter Design

Outlines the structure and goals of the spaces the player moves through.

- A. **Objectives:** Survive a fixed number of days with increasing challenge via enemy numbers and increasingly powerful enemy types
- B. **Structure & Layout:** Singular selectable maps that can be completed by surviving a prescribed amount of days
- C. **Gameplay Flow:** The player starts with basic materials and weapons in the day when the horde is attacking. Then when night comes, the player is able to gather themselves and prepare for the next day. Repeat.
- D. **Interactive Elements:** Placeable objects like walls, roofs, and mirrors
- E. **Progression Gates:** Each horde wave or day acts as a progression gate to achieve the prescribed number of days to “complete” a map
- F. **Environmental Storytelling:** Somewhat, the world is decaying as the player survives. Showing how desolate the world has become after the sun changed

7. UI, UX, & Accessibility

Covers how players interact with the game outside of direct mechanics, especially through screens and inputs.

- A. **Core UI Elements:** Health bar, inventory, zombie kill count, clock to track day-night cycle
- B. **Menus & Screens:**
 - a. Inventory menu (press I)
 - b. Pause menu (press Esc)
- C. **HUD Design:**
 - a. Health bar is shown persistently
 - b. Clock is shown persistently
 - c. Inventory is only shown when toggled
 - i. Zombie Kill count is only shown when inventory is shown
- D. **UX Flow:** The player selects a map from the main menu and begins playing
- E. **Onboarding:** The game teaches itself by highlighting mechanics as they come up on the first day of gameplay
- F. **Accessibility Options:** N/A

8. Production Notes (Optional)

This is where you put planning material if it doesn't live in a separate production doc. Can be skipped if you're still in the pre-production or planning phase.

A. Team Roles:

- a. Nathan Le: Coder
- b. Angel Aragones: Coder
- c. Nathan Cho: Coder

B. Milestones: Rough phases (prototype, vertical slice, alpha, beta, launch)

- a. Prototype: 3D Environment w/ controllable player character
- b. Prototype Alpha: Gun Mechanics, Inventory, Light Mechanics, Horde Spawning
- c. Prototype Beta: Object placement, Day-Night cycle, multiple maps
- d. Launch Build: Menu, UI, SFX, Level Selection

C. Out-of-scope Features: Some of the crafting systems may be too much to add to the core gameplay loop so it may get cut in favor of just having zombies drop those items

D. Marketing Hooks: Vampire fights the sun

E. Risks & Unknowns: Light mechanics might be too complicated to run in real-time. This might also apply to zombie hordes spawning many many enemy GameObjects

F. Live Ops & Post-Launch: N/A
